

The design process of Bougainvilla safe began with an overall market review and in depth analysis of what exist.

This is of utmost important because to create a new product one must be aware of the "next" trend and set the bar.

Our experienced designer team also went through an evaluation process as to divide the existing products into different categories to distinguish its design characteristics; which included keywords such as:

- warm in the sense of friendly
- traditional in the sense of safety
- trend, unique and stable.

Material shows the quality, color creates the trend.
 -- *Androgynous trend is developing*

- Aesthetic & design of Bougainvilla safe
- ☐ Cabinet – color and dimensions
